

MCIR Release Highlights

June 2018

Featured in this Issue

1. Bullets on MCIR Changes
2. Zoster Vaccine Schedules – Updated Information
3. Blood Lead Module – Use of ‘Less Than’ Symbol <
4. MCIR SIRS Reminder

Summary of MCIR Changes:

- The HPV forecast for unspecified gender follows the rules for HPV Male forecasting.
- Implement revised Zoster assessment rules (see article)
- Ability added for Provider Facility Type to Generate the "Patient Status By Provider and Jurisdiction" Report
- Private Inventory Transactions should not generate a Return/Waste Report
- FERPA Changes - Phase 1 - Disable access to SIRS Imms/Waiver data to nonSchool users (Local Health Departments) (Temporary measure, see article)
- FERPA Changes – Phase 1 - Remove LHD Users from SIRS Schools sites

Zoster Vaccine Schedules – Supplemental information

The Zoster vaccine series has had some recent updates in the Michigan Care Improvement Registry (MCIR) and is now assessing and forecasting for the *NEW* Zoster Vaccine, Shingrix. This recent MCIR update occurred on Wednesday, May 16, 2018 in order to align with ACIP recommendations.

In MCIR, there are now 2 Zoster schedules:

1. The first Zoster schedule is a Shingrix 2-dose series. This is when clients who are 50 years of age and older are recommended to receive 2

doses of Shingrix at least 2 months apart. MCIR will display this as:

- Zoster (RZV) Shingrix 1
- Zoster (RZV) Shingrix 2

2. The second Zoster schedule is a Shingrix 3-dose series. This schedule is applied in MCIR for those clients who previously received a dose of Zostavax and is now recommended to receive 2 doses of Shingrix to complete the Zoster vaccine series. MCIR will display this as:

- Zoster ZVL (Zostavax) 1
- Zoster RZV (Shingrix) 2
- Zoster RZV (Shingrix) 3

The reason for this display and why MCIR will assess for this is because MCIR looks at the Zoster vaccine series. Zostavax is assessed in the Zoster vaccine series and will count towards assessment.

Blood Lead Test Results Info now displays with symbol when available

MCIR has displayed Blood Lead test results in its Lead Module since the early 2000's. Test results received by the Childhood Lead Poisoning Prevention Program (CLPPP) until 2017 rounded the test results. In other words, a test result of 2.3 would show as 2.

MCIR Release Highlights

June 2018

Due to CLPPP system changes, they are now able to receive and store results in decimal form as well as display associated 'less than' symbol < when received from the lab. However **CLPPP is not able to share the decimal results just yet.** CLPPP still is in the process for developing policy and procedure relating to the display and dissemination of the decimal results.

However, as of June 13, 2018, MCIR will show the symbol associated with a test result only when it is available (example below).

For questions concerning Blood Lead Test Results displayed in MCIR, contact the Blood Lead Program at 517-335-8885.

MCIR SIRS Reminder!

A Special Edition *MCIR Release Highlights* was distributed on June 1, 2018 to explain temporary changes occurring in the Schools Module known as SIRS.

As of June 8, 2018, Local Health Department's access to SIRS has been disabled TEMPORARILY and LHD staff direct access to school sites has been severed. This action was necessary to bring the MCIR SIRS module in compliance with FERPA.

The access to the SIRS module will be restored on July 25, 2018 when parental consent functionality is added to SIRS K-12.

A Special Edition MCIR Release Highlights will be distributed prior to July 25th to explain SIRS changes and share other information that may be helpful to SIRS system users.

Currently, MCIR support staff and School staff are still able to access MCIR SIRS.

Thank you for your patience during the LHD – SIRS Temporary-Loss-of-Access time frame.
